Education

University of the Cordilleras Baguio City, Philippines
Bachelor of Science in Information Technology April 2026

Technical Skills

Languages: Java, Python, JavaScript, PHP, SQL
Frameworks: React, Node.js
Tools: Git, GitHub, VS Code
Databases: MySQL
Operating Systems: Windows

Experience

University of the Cordilleras – Innovation and Technology Transfer Office (UC InTTO) **Baguio City, Philippines**
Web Developer (Project-Based) — TARAKI-CAR 10x Project **October 2025 – December 2025**

- Conducted website testing to evaluate usability, navigation, responsiveness, and user experience.
- Gathered and consolidated stakeholder feedback to identify website issues and recommend improvements.
- Refined website functionality and content based on validated feedback to prepare the platform for public launch.
- Prepared feedback reports and coordinated with project staff on technical requirements and final website turnover.

Web Developer Intern (Team Lead) **May 2025 – August 2025**

- Led the development of TARAKI and Kapital, building full-stack web applications across frontend and backend components.
- Developed frontend interfaces and backend functionality to support project requirements and core application features.
- Deployed web applications and configured hosting environments for accessibility and testing.
- Diagnosed and resolved software bugs through debugging and iterative testing to improve application functionality.
- Coordinated development tasks and collaborated with team members to implement features and address technical challenges.

Projects

TARAKI Website — Full Stack Developer / Team Lead
Technologies: React.js, Node.js, MySQL, Railway

- Built a full-stack web platform using React.js, Node.js, and MySQL for TARAKI under UC InTTO.
- Developed and integrated frontend and backend functionality based on project requirements.
- Deployed backend services using Railway and migrated project resources to the hosting environment.
- Collaborated in technical meetings and strategic planning to improve system functionality and project outcomes.
- Created feedback forms using Google Forms to support user evaluation and project improvement.

Kapital – Full-Stack Startup Networking Platform
Technologies: PHP, MySQL, JavaScript, HTML, CSS

- Developed a full-stack platform connecting entrepreneurs, investors, and job seekers through role-based workflows.
- Designed a relational MySQL database supporting user profiles, startups, investor preferences, messaging, and notifications.
- Implemented role-based authentication, authorization, and CRUD functionality for startup and user management.
- Built startup discovery, investor preference matching, messaging, and notification features to facilitate connections and opportunities.
